Aspirational Active Transport Network Maps

These maps provide reference for potential future routes and infrastructure development. Routes and infrastructure elements will be subject to review and may change throughout the life of this strategy.

Connections between townships are a key aspiration for increased active transport participation. Whilst there are already some existing trails, significant detailed work will be required to explore new connections between townships.

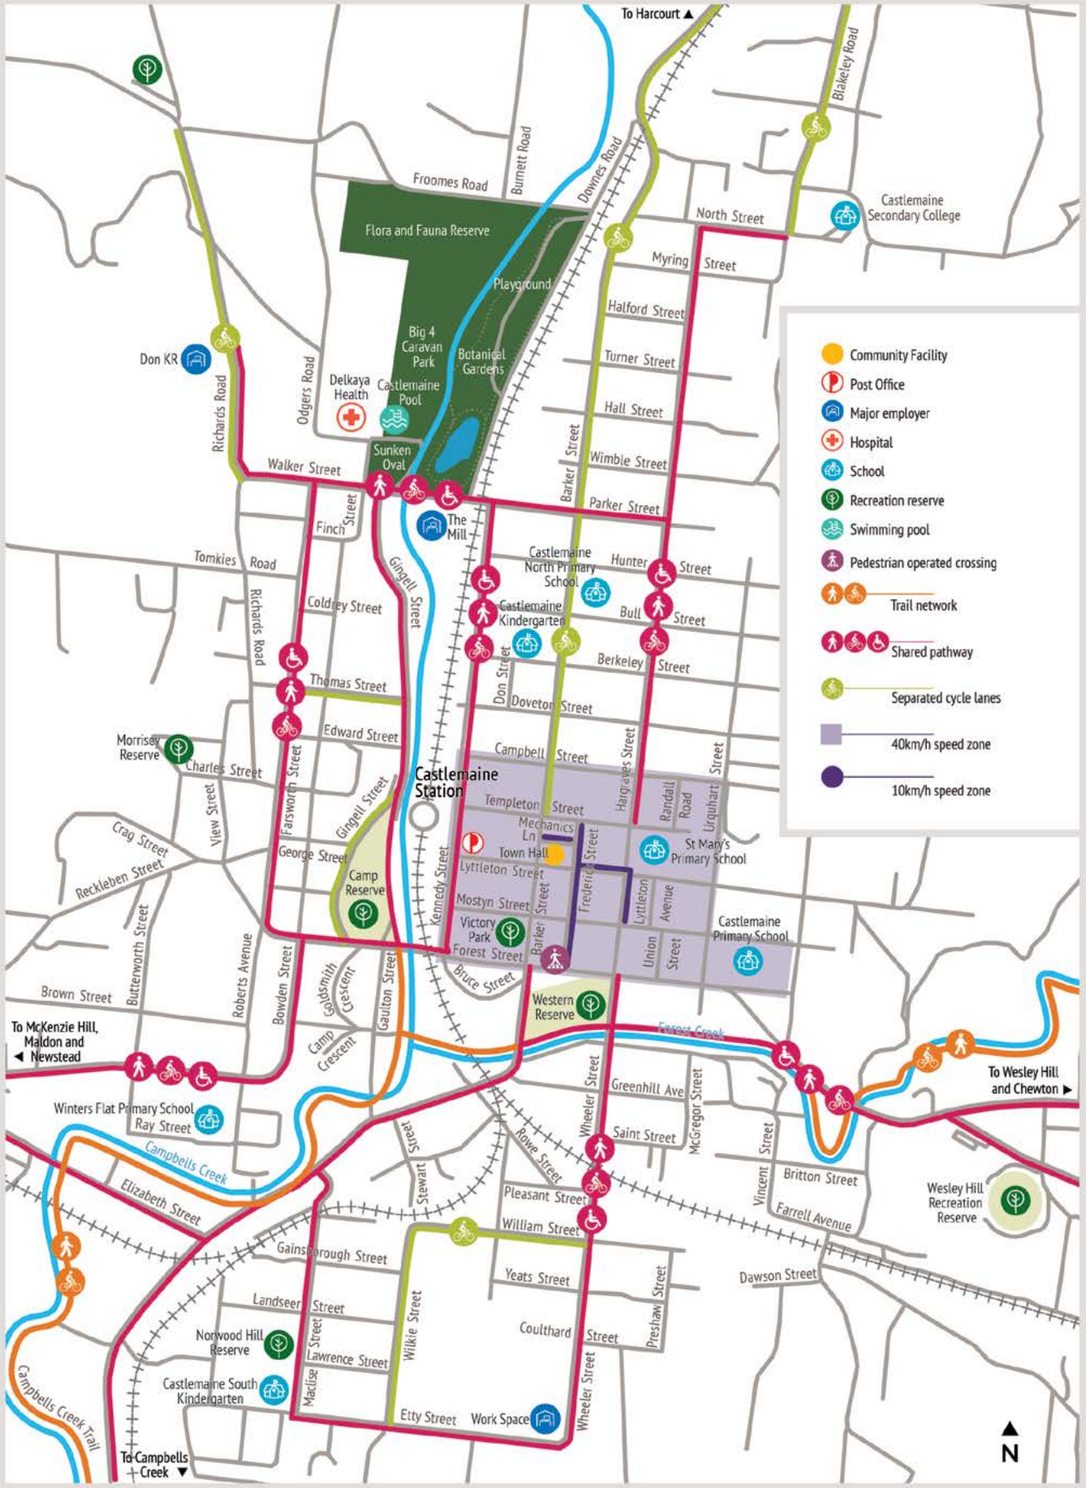

Sealed footpaths are key to the delivery of active transport options. These maps do not highlight the current sealed footpath network, nor future proposed footpath. The aspiration is to provide at least one sealed footpath along one side of each road within each town centre zone across the shire.
